

It's now May 28, 2023, and there is a problem with the ENTIRE TREE.

The tree has developed “Tree-Dropsies”! It's when tree branches can all of a sudden FALL down. Dead branches are the worse! Half-dead branches can also fall and hit someone in the HEAD.

We have to get an Expert to tell us what we can do.

We ask that visitors stay in the STREET because we never know when a Branch will fall. We also invite you to keep off the GRASS because about 100 to 300 Climbing Ants & Spiders will be walking around the tree.

The expert indicated that we need a big pile of CLIMBING ANTS to climb the entire tree and GLUE all dead & half-dead branches.

We also have to get some SPIDERS so they can secure the Dead branches by putting them in a web and letting them down safely. Then they will get to the Half-dead branches. We have already removed a pile of dead branches, but the expert must climb the tree and tell us how many branches are weak.

The Fairies were reassigned to Mississippi to help with a flooding issue. They took their entire house with them! Not sure what they can do, but as soon as we know, we will let you know.

THE Gnomes when to Georgia with one or two counties with a rare form of “liaarrs grass”. It's when the Moss gets under the grass and rots the grass from the roots out. It's tough to get rid of that kind of disease. They also had to take their Special animals with the cage, the very short gnomes & both of their Houses.

I guess they felt that this TREE Problem could be worse than WE THINK!
