

Chapter 5 6/24/2022

The Gnomes returned from Florida after taking some NUTS & WASHERS they found when building the Large Cabin for the Fairies. They had good news and bad news. The Bad news was the Nuts were very rusty, and the owner had to re-thread the center holes before he could use them. He said the nuts & washers had to be in the ground for at least 30 years. He gave the Fairies enough of the Unicorn meal to take back, but he might only provide them with ½ of what he promised for the next lot. As for the Good news, the Washers were in better shape, and he loved them. We will see how much FOOD for the Animals we can Barter for when they take more washers to Florida.

The little bags hold the Nuts & Washers with a sample of each on the outside. As the Gnomes finish the night's work, they fill a few bags of each and bring them into the Tree until some gnomes return to Florida.

This time they want to take more "Washers" than nuts so they can "Barter" with the people who sell feed for their "prehistoric-type" animals.

The animals are eating a lot more this June because they found a bunch of rocks on the property.

They took the rocks back to the animal's pen and stepped on them, POPPING them like balloons.

If you listen at night, you might hear the popping!

**ANY YELLOW Flower
these Animals LOVE to eat**

These animals love to eat YELLOW flowers to..... If you find any of these flowers, put them in their PEN, and they will get eaten while they are being Washed. Why do we have to wash these animals?

There are at least 5 or 6 and a few more animals that should be coming from Florida to crush the Rocks to make dirt.

So we will need a whole bunch of Yellow flowers.

There is some news regarding the weather for the next couple of days & it looks like a lot of rain is in the forecast. This rain will help keep the animals cool but will affect the Fairies because of the rain. Their wings can't get wet, or they won't last long. They will have to stay indoors during the rain. They get real cranky when they don't fly around. They play Hopscotch a lot. Have you ever played Hopscotch? Ask you're Mom if she every Played HOPSCOTCH?

Also, the Unicorns get a "little joyful" in the rain. They won't listen to the fairies when told what to do. It's all in play, but the fairies must contend with rain that comes down at different times. They let the Unicorns do whatever they want until the rain finally stops.

The Gnomes have a habit that we might consider weird; They CHEW Water! The magic water that is invisible and once a fish is caught becomes visible is the water I'm talking about. The Gnomes told me that the Magic water could be cut into shapes, like a Circle, a Square, and a Triangle. Can people cut the water we drink into Shapes?

They cut it in circles, put them in their pockets, and when they are thirsty, they pop one in their mouth. They don't swallow, "they chew it" like gum. They can chew it for ½ an hour. Isn't that a long time?

The gnomes want to thank Mason for all the NUTS he collected for them.

Some little visitors like to visit the Gnome tree, meet the Fairies, and see how they live. I think one visitor found Cozmo, the Puppy he was checking out the "Little Fairies Cabin."

He was telling the Gnomes how to lift the Bags of NUTS & WASHERS while his Grand Mom was watching him.

He said to lift the genuine bags really high!

The Gnomes appreciated his help.

Then some other animals were seen eating some of the flowers that some people left for the Prehistoric-type animal.

Something ate Our Dinner Flower?

What is it!? Is it a Pig? A mouse?

You are eating to flowers the Kids left!

You are eating our flowers!
