

**Chapter 7-6 7/27/2022**  
**The Fairies feed their Unicorns.**

The fairies worked every day, and the Gnomes worked at Night. Each group helps to take care of the Grass. The fairies used the Unicorns to check the roads (under Ground) and map those roads, so no one ever got lost. Every so often, they would post lanterns that automatically come on. We never knew how they did that; I guess they sprinkled "Fairy DUST" because they had to replace either the "green" or "yellow light."

One day the children were collecting the branches that fell from the Tree & piling them up near the SMALL Fairy House. The unicorns were arguing each other to get a piece of the Tree. The fairies were watching the Unicorns milling around a pile of sticks after work and noticed they were not eating the Bark but "stripping the bark" from the Branches. Then they would lick the insides of the bark.

They all gathered around and tried to understand why the bark was so good. Each fairy tasted it, and the Fairies said it "tasted Sour."

So they tried an experiment! They took the bark off the branches and put them in piles. They then took some "regular" (we get from our facet) water and some of the "Invisible Water" that surrounds the Tree and soaked the bark in that water. Sometimes they left the bark in the water all Night. But the Unicorns never licked the bark in "regular water."

Finally, they figured out the Bark only had to be put in the "Invisible Water" for a maximum of 5 minutes. Take the Bark and scrap it off with the SPECIAL Wooden Spoon. They created "bark butter" .....

They asked the Gnomes, "how can we strip the bark off the branches?" The Gnomes created a fixture that stripped wire and built that fixture to strip the bark off.

The Fairies and the Gnomes now created either "Bark Butter" or "Bark Jam," and the fairies put that bucket of bark butter to smear it on the Unicorns meals at Night.

The Gnomes also used a bucket for "Bark Jam," They poured it the meal to feed their "Special Animals." What it tasted like, special animals or the Unicorns never told us, "they were just very HAPPY."

NOW visitors who visit the TREE can leave branches that fall from around the Tree and pile them up by the Small

Fairy house.  
Make sure you leave some branches that fall from the Tree!

Visitors must also remember the "special animals" really

"Luv" to eat those "Yellow Flowers" The gnomes gather the flowers up and hang them in bags in the "Invisible Water," this way, the Flowers stay fresh.

Another thing the Gnomes had to FIX was the launching "Table" when Night came, and they walked out of that Garage DOOR. So many special animals that "jumped UP" before jumping OFF and "broke" the Frame of the system.

The Gnomes rebuilt the Frame and supported it so the Special Animals could jump up 3 or 4 times because they were so happy!
